

# **IPS Ltd**

## *Case Study 2*

Stolen cars are common phenomena in the UK unfortunately, but when was the last time you saw a stolen JCB Digger or Crane being raced by boy racers? Well that maybe pushing it a little but one such Owner had such a problem. His company were losing Earth moving equipment on a regular basis from remote sites.

Organised gangs were arriving with Low Loaders and making off with £000's worth of high quality Plant. Some of the sites were huge in area and it was beyond the range of site-based security Guards.

Enter IPS Ltd with the remote activated alarm system. At the close of each working session the Plant Driver closed up his Cab and set the system using just one turn of the key. Using extremely sensitive detectors any movement (allowing for extreme weather) would cause the Alarm to activate sending a signal to the National Control Centre who in turn would turn out a Security Guard or the Police if required.

With adequate signage informing people that the Plant was protected by the alarm the result has been staggering, no reported thefts for over 1 year. The whole service costing a very modest sum indeed when compared to the price of just one single stolen JCB Digger.
